## Hercules beetle

Editor:  THE NATIONAL SCIENCE MUSEUM  
国立科学博物館

Scientific name: *Dynastes hercules*. Hercules beetles are found in isolated pockets of the Central and South American tropical rainforests.

These are the world's largest beetles, with males measuring 46-178 mm and females 50-80 mm in length. Male hercules beetles feature two long horns as long as their body, and the front wings are yellowish orange in color. Depending on environmental factors like humidity, some hercules beetles can be completely black. This species is partitioned into twelve subspecies based on the size of thoracic horns and the location of the projections.

\*This model was designed for Papercraft and may differ from the original in some respects.

■ Parts list(pattern):Eight A4 sheets(No.1 to No.8)

■ No. of Parts:88

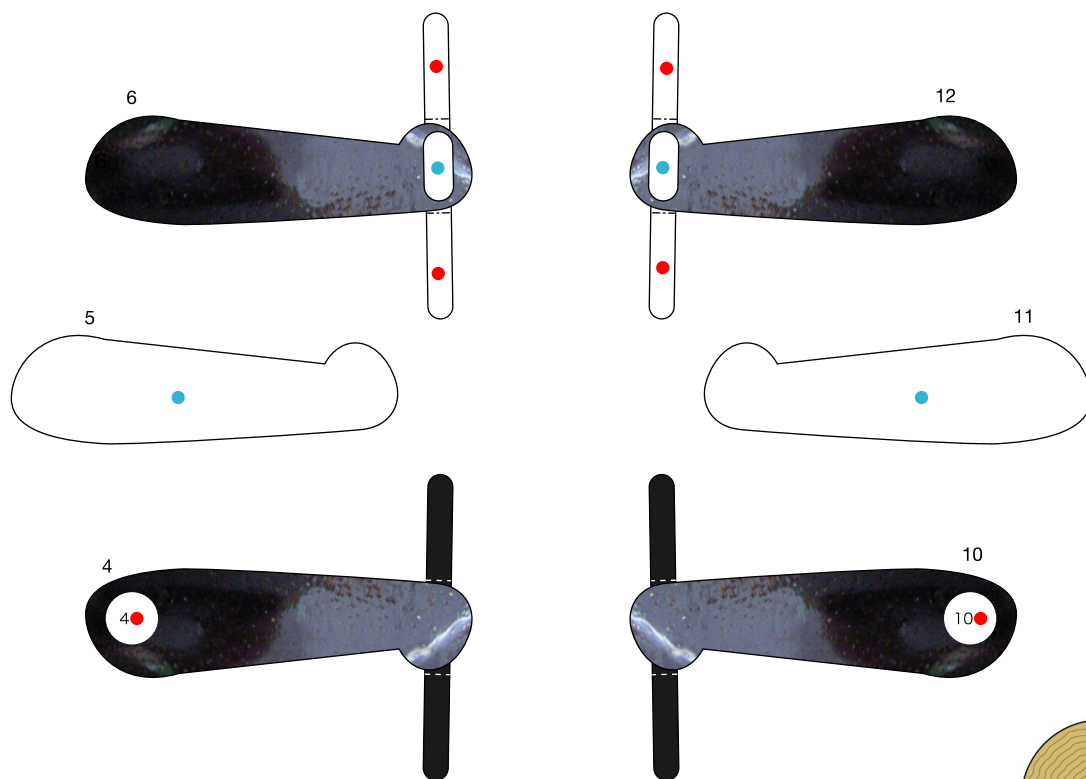

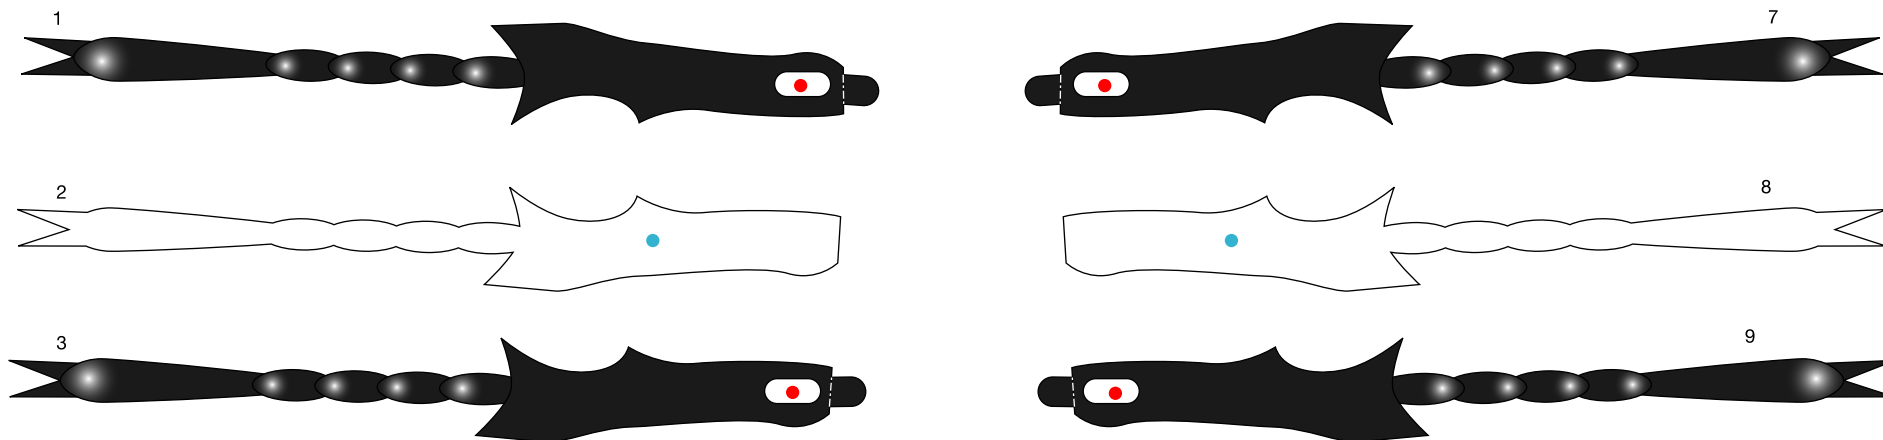

\*Build the model by carefully reading the Assembly Instructions, in the parts sheet page order.
